

CIRCULAR ECONOMY AT GROHE

GREEN BUILDINGS ARE THE FUTURE – REDUCING RESOURCE CONSUMPTION AND POLLUTION FOR A HEALTHY PLANET AND SOCIETY

AIMING FOR A BETTER WORLD WITHOUT WASTE – CIRCULAR ECONOMY AT GROHE

ULTIMATE SUSTAINABILITY WITH GROHE'S CRADLE TO CRADLE CERTIFIED® PRODUCTS

This circular model is the basis for the Cradle to Cradle® design concept. Here products are designed and manufactured with the intent of using the components in the end-of-life-phase for the creation of new products.

GROHE has launched six best-selling products as *Cradle to Cradle Certified®* variants:

GROHE collects the used filters and passes them on to BWT, where 99% of materials are recycled.

The *Cradle to Cradle Certified®* Product Standard is the world's leading science-based and rigorous norm for designing and manufacturing safe, circular and responsible materials and products. Find more information [here](#).

To achieve a certification, a product is evaluated in terms of the following five categories: material health, material reutilization, renewable energy, water stewardship, and social fairness.

Each product is then designated a level of achievement: basic, bronze, silver, gold, or platinum.

Further reduction of a buildings' carbon footprint: The sustainability benefit of the two *Cradle to Cradle Certified®* faucets, GROHE Eurosmart and GROHE BauEdge, is enhanced with the SilkMove ES technology, where ES stands for energy-saving. The technology prevents the unnecessary use of hot water by supplying only cold water with the faucet lever in the middle position.

Emissions from buildings and construction constitute almost 40% of global carbon emissions*.

* European Commission, 2020
