EVERYONE'S FAVOURITE RELOADED GROHE EUROSMART KITCHEN

WELCOME TO THE HEART OF THE HOME! Nowadays, the kitchen is increasingly merging with our dining and living spaces, turning it into the heart of the home. It has become more than just a functional space to prepare food and instead evolved into a design statement in its own right, with the centre of attention increasingly turning to the sink and tap area.

GROHE EUROSMART TAPS - COMPLETE FLEXIBILITY, ULTIMATE COMFORT

The new and updated GROHE Eurosmart taps are available in a vast selection of designs: with two different heights, low and high spout, as well as a two-handle variant. With this expanded range, there is guaranteed to be a Eurosmart kitchen tap for everyone. Eurosmart is available in brilliant Chrome with some designs available in contemporary matt SuperSteel finish, both with an easy to clean and scratch-resistant surface. Not only do the taps boast slim and modern looks but great functionality too, with features such as the swivel spout or pull out option allowing complete flexibility within the sink area.

SAFE WATER CONSUMPTION

With **GROHE Zero** there is no contact of the water with lead and nickel within the mechanism of the tap thanks to isolated inner waterways that ensure an extra safe water consumption.¹

INSTALLATION HAS NEVER BEEN SO EASY

Thanks to the practical **GROHE FastFixation Plus** system, the installation of GROHE Eurosmart is particularly easy and quick. Due to the tool-free and pre-assembled fitting, installation is fast and hassle-free.²

HOLISTIC KITCHEN DESIGN BY GROHE

For a coordinated kitchen design, the tap should also be accompanied by a matching sink. Both the K200 or K400 stainless steel sink with different drainer variants make perfect companions for the Eurosmart taps. For people who prefer stylish dark colours, both sink series are also available as composite sinks in granite grey and granite black. All sinks are available in different sizes to make sure that the kitchen elements meet the needs of your space.

EXTENDING THE MODERN HOME DESIGN TO THE BATHROOM

At GROHE, innovations are not just limited to developing new products but also for reinventing existing favourites. With the relaunch of the Eurosmart bathroom tap range, GROHE is not only introducing the fourth generation of its contemporary design bathroom favourite to match the Eurosmart kitchen range, but also launching completely new product designs. For further details see the GROHE Eurosmart bathroom fact sheet.

The range comprises washbasin, shower, bath and bidet solutions that match the Euro Ceramic collection perfectly in form and function and simplify the bathroom planning process by offering a distinctive design across the entire bathroom space.

Combining modern design with ergonomic functions and smooth installation, GROHE Eurosmart offers a desirable solution for any bathroom.

PUTTING A FOCUS ON HEALTH AND SAFETY

GROHE TripleCore: Thanks to its innovative zinc die casting process, which takes place during manufacturing at the LIXIL plant in Klaeng, Thailand, one of the most sustainable plants in South East Asia, GROHE taps offer safe water enjoyment. Not only is the **surface of the tap seamlessly closed** so that impurities cannot enter, there are also dedicated inner waterways to make sure the **water does not come in to contact with any lead or nickel** within the tap. In addition, the inner waterways within the tap itself have no contact with the body of the tap, creating a **barrier between the hot water and external surface**, which helps reduce the risk of scalding.

SUPPORTING A SUSTAINABLE LIFESTYLE

By restricting the water flow, product variants with **GROHE EcoJoy** and **LowFlow technology** support consumers with a more sustainable water consumption.

With **GROHE SilkMove ES**, product variants support the saving of energy and water. Thanks to the cold start technology, the mid-lever position only provides cold water, thereby reducing wastage of hot water and saving precious water and energy.

SMALL HOME IMPROVEMENTS MADE EASY

Small changes with big effects. Just by simply replacing the tired-looking tap in your kitchen and bathroom, you can instantly refresh the look of some of the most frequented rooms in your home.

For those who want to take these little DIY tasks into their own hands, GROHE offers GROHE Start for the kitchen and bathroom. It combines many of the benefits of the GROHE Eurosmart range with easy and straightforward installation. With GROHE Start bathroom kits, for example, you are supplied with simple instruction guides and a 3-in-1 tool, providing you with everything you need to complete the installation quickly and easily. With everyone supplied in just one box, there is nothing stopping you from upgrading your home!
